01 - THE IDEA

What is RoleDesk?

RoleDesk is a private workspace for finding suitable jobs and freelance clients, preparing truthful applications, and keeping every career conversation organized. It assists you; it does not make final decisions for you.

The simple version

RoleDesk reads your reviewed profile, searches permitted sources, ranks opportunities, prepares the next action as a draft, and waits for your approval.

Your job

Review the shortlist, correct missing information, approve exact drafts, and make every final submit or send decision.

RoleDesk's job

Collect information, compare it with your profile, explain fit and risk, and prepare useful drafts without inventing facts.

The non-negotiable rule

Every proposal, email, form answer, reply, negotiation message, application, and bid stays a draft until you review it. RoleDesk never silently sends, applies, bids, signs, accepts, contacts, or submits.

Why this design matters

Job platforms have different rules, application questions can be sensitive, and an incorrect claim can damage trust. The approval layer keeps you in control while reducing repetitive work.

02 - CURRENT BUILD

What works now

The current release is a supervised beta. It combines permitted live listings with local profile tools and protected Supabase data.

AREA	CURRENT BEHAVIOR	STATUS
Resume profile	Browser-based PDF, DOCX, or TXT extraction	WORKING
Smart Search	Remotive and Arbeitnow live feeds with profile ranking	WORKING
Guided platforms	LinkedIn, Naukri, Upwork, and other guided links	WORKING
Opportunity review	Match evidence, risks, source, save, draft, and track	WORKING
Private database	Supabase Auth, RLS, cloud sync, and draft approval	WORKING
Full AI drafting	Backend model integration	NOT IMPLEMENTED
Gmail monitoring	OAuth inbox connection and sending	NOT IMPLEMENTED
Automatic applying	Final submission without manual approval	NOT ALLOWED

Discover includes demonstration opportunities. Smart Search queries current permitted feeds.

03 - DAILY WORKFLOW

From profile to decision

1

Create your private login

Use Connect private cloud, confirm the Supabase email, and sign in.

2

Add your resume

Upload PDF, DOCX, or TXT in My Profile. Review every extracted fact.

3

Complete the profile

Add name, target roles, skills, portfolio, preferred locations, rate, and availability where known.

4

Run Smart Search

Search a target role, inspect why each listing matched, and save only relevant work.

5

Draft and approve

Edit every claim, recipient, answer, and message. You press the final apply or send control yourself.

6

Track the outcome

Move opportunities through drafted, sent, replied, negotiation, hired, completed, or skipped stages.

04 - SCREEN GUIDE

What each part does

Discover

Demo dashboard for learning scores, risks, and tracker behavior.

Smart Search

Permitted feeds, expanded role searches, match evidence, and official routes.

Tracker

Reviewed status stages for every opportunity and conversation.

Proposal Studio

Editable drafts from known profile and opportunity details.

Email Desk

Exact sender, recipient, subject, message, and approval state. It does not send.

Pricing Lab

A reviewable pricing range based on scope and working assumptions.

My Profile

Resume facts, completeness, corrections, and personalized matching.

Application Companion

User-triggered field scanning and reviewed answer insertion. It never submits.

Resume truth rule

RoleDesk never invents qualifications, roles, years of experience, rates, availability, locations, employers, awards, certifications, or portfolio work. Missing evidence stays blank or becomes an editable placeholder.

Compatibility and privacy

Existing Supabase rows and database table names remain unchanged. Older scope-* browser keys and scope:// compatibility records continue to work. Internal compatibility identifiers are retained to protect existing data.
